Application	●Used for lower temperature environments (temperatures down to -70°C). ●Ideal for food processing, especially when some breathability is required to alleviate pressure.	●Perfect when some breathability is required to alleviate pressure. ●Used for higher temperature environments (temperatures up to 130°C).	●For extreme temperatures and highly resistant also against alkalis / acidic / caustic products.	●Designed for breathing applications such as venting hoppers and other contained vessels. ●May become required as BFM® connectors create a 100% sealed system.	●Used in over pressure and potentially explosive applications. ●Can be used with food processing. ●Designed to fit over existing connectors and uses simple butterfly mechanism (no tools required).	●Used for light sensitive areas and processes - cuts out all light. ●Designed to fit over existing BFM® connectors and uses simple butterfly mechanisms (no tools required).
